EDUCATION

Diploma of Computer Engineering – With High Honors

ESPRIT – Private Higher School of Engineering and Technology
2022 – 2025

SKILLS

mobile development : Android, iOS, Flutter, Unity

web development :
NodeJs, react,
.NET Framework, Spring Boot

Programming languages : Java, Javascript, dart, swift ,kotlin

version control : GitHub, GitLab

Tests API: Postman, Swagger

Virtualisation: VMware, VirtualBox

Outils DevOps: Jenkins, Nexus, Docker, SonarQube, JUnit
operating system: Linux, macOS, Windows

Project Management: Jira, Trello

LANGUAGE

Arabic: native

French: Professional proficiency

English: professional proficiency

PROFILE

Computer Engineering graduate with solid experience in mobile development, web technologies, and backend engineering. Proficient in React Native, Spring Boot, and cloud fundamentals. Passionate about building clean, high-performance, and scalable solutions, as well as solving real-world problems. Currently seeking a full-time opportunity as a Software Engineer.

PROFESSIONAL EXPERIENCE

IPact Consult

July 2023 – September 2023

Capstone Project

Development of “Tawasalna”, a hyper-local application that enables users to communicate, interact, and publish location-based content, featuring an integrated marketplace. Designed using MVVM architecture, with a React Native (Expo) frontend and a Spring Boot backend. Focused on performance optimization to enhance overall user experience.

IPact Consult

Juillet 2024 – Septembre 2024

Summer Internship

application for franchise owners to efficiently manage their restaurants. The portal provides features for overseeing operations, managing staff, and tracking performance metrics. Built with Node.js on the backend and React Native with Expo Go on the frontend, ensuring a seamless and responsive user experience.

ACADEMIC PROJECTS

Election Management System

desktop application in C on Ubuntu for managing elections. Designed a user-friendly interface using Glade with GTK+, enabling functionalities such as candidate and voter management, electronic voting, and results display. Implemented local data storage using flat files (CSV/JSON)

AquaGuard

mobile application suite for Android, iOS, and Flutter aimed at promoting water conservation and protecting aquatic life. Designed admin and user interfaces with a Node.js-powered backend for seamless functionality. Focused on environmental sustainability and leveraging technology for impactful solutions.

CrossChat

Designed and developed a proprietary real-time messaging SDK for Android, iOS, and Flutter applications, accessible via a dedicated platform. The platform allows users to register, generate tokens, and download the SDK tailored to their development needs.

DEVOPS CI/CD pipeline development

developed a CI/CD pipeline for a full-stack application using Spring Boot and Angular
